Reasons for Allowance

Claims 1-21 were examined and considered allowable over the prior art. The cited references, Bruce (U.S. Publication 2002/0095623) and Meyer (U.S. Patent 6,061,822) do not disclose the limitations of amended claim 1. Specifically, they do not disclose:

at a second time, generating a second sequence of numbers based on a second seed value using a pseudo random number generator, the seed value including a second time sensitive code based on the second time

writing the second sequence of numbers on the second memory device and a second memory device using the data storage system;

reading second sets of data stored on the second memory device and the second memory device; and

comparing the data read from the second memory device to the data read from the second memory device to evaluate integrity of the data written onto the second memory device.

Bruce and Meyer disclose performing the method of claim 1 once, and do not teach or suggest testing the same memory location at a second time with a different time based seed value.

Independent claim 20 is allowable for the same reasons as claim 1.

With regard to claim 10, the prior art does not disclose the limitations:

Art Unit: 2113

Logic adapted to:

Direct the generator to generate a plurality of sequences of numbers, each sequence based on a different seed that includes an event sensitive code; and

Direct the controller to write, at different times, each sequence to the same location on the memory device under test and to compare each sequence to data stored on a second memory device.

Bruce and Meyer disclose performing the method of claim 1 once, and do not teach or suggest testing the same memory location at a multiple times with a different time based seed values.

Dependant claims 2-9,11-19, and 21 are allowable as being dependant on base claims 1, 10, and 20.
